

Школьники 8 Б класса приняли участие в международной научно - практической конференции «Памяти М.В. Ломоносова» на английском языке

26 апреля 2018 года ученики 8 Б класса приняли участие в V международной научно - практической конференции «Памяти М.В. Ломоносова» на английском языке для иностранных студентов, которая проходила в Северном государственном медицинском университете. Традиционно в ней приняли участие студенты международного факультета врача общей практики, лечебного факультета и впервые учащиеся

Архангельской средней школы Соловецких юнг. Были представлены 9 устных и 6 стендовых докладов, среди которых стендовый доклад M.V.Lomonosov and Arctic, выполненный нашими ребятами.

M.V. LOMONOSOV AND ARCTIC

Early life and family

Mikhail Vasilyevich Lomonosov (1711-1765) was the son of a fisherman who lived on the shores of the White Sea in Northern Russia. His generation of farmers before him, from early childhood he participated in the annual fishing and hunting expeditions that are now such things. Later his father built a two-masted vessel in which he and his son formed trips between small settlements as far distant as the Kola Peninsula. Although Lomonosov left home for Moscow in 1738, he maintained contact with his White Sea family and friends and never forgot his early schooling in Arctic navigation.

The role of M.V. Lomonosov in the exploration of the Northern Sea Way and Siberia

Lomonosov was an active supporter of the exploration of the Northern Sea Way and Siberia. In an often quoted famous phrase of Lomonosov about "Russian power" there is an important idea of the scientist: "Russian power will grow by Siberia and the Northern Ocean and reach to the main European settlements in Asia and in America." This phrase proves the necessity and possibility of establishing a regular maritime traffic between the ports of Archangel and the Pacific Ocean (the future of the Northern Sea Route).

It is known that Lomonosov strongly supported the holding of the Great Northern Expeditions for studying and further development of the vast northern territories. He developed the special questionnaire for the participants of expeditions to identify and describe the specifics of natural conditions and resources, the life of indigenous peoples, etc.

In his later years he was engaged in scientific and organizational support for a large naval expedition under the command of V.S. Chibrikov. This expedition was a major milestone in the development of the North. By joint efforts of scientists and sailors was realized for

a long time about the heroic attempts of successful penetration into the central region of the Arctic Ocean, the programme of oceanographic and meteorological observations was fulfilled, there was a significant contribution to the search of the great sea route to the eastern border of Russia.

Lomonosov was an excellent cartographer. In the maps made by himself the artist's skill could successfully combine geographic knowledge and geographical memory.
